

Deer Creek Golf and Landscaping Report – December 2025

Golf Course: Welcome to 2026! We hope everyone enjoyed their holidays. This has been an unusually dry year. The rain deficiency in our area is around -13 inches. Fortunately, the pump station has performed well, but we were still limited on how many gallons we could use. We hope everyone enjoys their golf course and we ask that everyone helps in repairing ball marks and filling in divots.

Greens: With the foggy mornings, we have been applying a weekly fungicide to manage the disease conditions. We will also be applying an herbicide to eradicate poa annua. This application will be made on Jan 8, 2026 immediately following the couples league.

Tees and Fairways: The winter grass has continued to fill in for these areas. We are topdressing by hand with a seed, sand, command mix. We have applied fertilizer to these areas twice in December. We have also applied wetting agents to aid in retaining some moisture.

Pump Station: The system continues to run smoothly as long as we clean the screens daily.

Golf Irrigation: The central station has been installed. There is still a sufficient amount of programming left to start using it on a daily basis. The Hunter crew will

be back around the middle of January to follow up.

Landscape: We are continuing our bi-weekly mowing schedules. These areas have been fertilized and have had a herbicide treatment.

Landscape Irrigation: See report

Looking forward to a great green year!!
