

## Deer Creek Golf and Landscaping Report    November 2025

**Golf course:** We want to welcome you all back to Deer Creek. We look forward to a great season! The season has come and we are ready. We have prepared the course to be in the best condition that we have seen in many years.

**Greens:** We continue weekly foliar fertility applications. An insecticide was applied to treat worms and grubs. We are rolling once per week. As you can see, the greens continue to be healthy and smooth.

**Tees & Fairways:** These areas are receiving topdressing that contains sand, command mix and rye grass seed. They continue to fill in and create level playing conditions. The mix that was used over the summer has helped to level out the Tees. We still have some tees that need more extensive work, particularly # 12. Our plan is to continue to use this mix next year starting in May.

**Pump Station:** The system is running as it should with no issues at this time.

**Golf Irrigation:** We have begun work on installing the central station.

We have applied for a frequency license and Hunter Golf will be here Dec 15 to finalize the installation and program the central station.

Central Irrigation System

**Landscape:** We are fertilizing these areas in December with a weed and feed mixture. We are continuing with bi-weekly mowing

# 10/11 Greens

**Landscape Irrigation:** See report

We hope that you all had a wonderful Thanksgiving and wish you Happy Holidays!
